

AESSMART CARE

A Holistic Approach
to Public Health and
Social Services

Adsystech is proud to offer AESsmartCare, a next generation technology that uses a holistic approach to solving public health challenges. Using an integrated suite of modules to address the expanding needs of public health and social services, AESsmartCare provides the necessary intelligence to drive more effective public policy decisions from a single system.

Centralized Data: Our health and human services data is centralized, which benefits both you and your constituents by providing the most complete information available.

Efficient Analysis: We maintain a substantially improved data set that analyzes the quality and cost of delivering services to your constituents. Dedicated technical staff take care of system maintenance, making our product hassle-free for both medical staff and your constituents. AESsmartCare provides you with the ability to measure constituent gains across all demographics and evaluate the related return on your investment. As constituents are successful, AESsmartCare provides you with the information you need to deliver targeted and cost-efficient services.

AESsmartCare Advantages

1. Holistic approach to solving public health challenges
2. Centralize Health and Human service data for improved service delivery
3. A substantially improved dataset for analyzing the quality and cost of delivering services
4. Ability to measure constituent gains across all demographics and evaluate the related ROI
5. Identify how best to utilize human services as a preventive means of reducing medical costs
6. One-stop point of entry for address both health and all human services (most important during a disaster)

We are unique because we provide you with the tools to deliver both health and human services in a comprehensive and holistic way. AESsmartCare empowers you to make the best decisions for your community.

City of Chicago

The City of Chicago has adopted Adsystem's AESsmartCare by means of the Electronic Medical Records (EMR) module. With this solution, Chicago's medical documentation will be made unbelievably easy. The EMR module provides the City of Chicago with a HIPAA compliant, tested and certified system that is hassle-free for both patients and medical staff, and allows access to a patient's complete medical history. In addition to improvements in medical documentation, EMR allows the City of Chicago to manage medical processes and make more informed clinical decisions by simplifying billing and claims procedures, simplifying data entry with Smart-Form technology and providing easy access to financial and practice reporting.

Tools for Prevention

AESsmartCare minimizes your cost and maximizes your effectiveness by analyzing your community and identifying how best to utilize human services as a preventive means of reducing medical cost. AESsmartCare gives you the ability to distribute valuable resources effectively to save time and money and prevent health crises.

One-Step Point of Entry: AESsmartCare provides a one-step point of entry to coordinate both health and human services. In a disaster, this allows you to save valuable time and move quickly with the secure knowledge that our system provides you with real-time, unified and comprehensive profiles of your constituents.

Manage Outbreaks: AESsmartCare makes it easy for you to track and manage public health outbreaks. Armed with detailed data on your constituents, we make it easy for you to make crucial decisions during the most critical of times.

Comprehensive and Targeted: We are unique because we provide you with the tools to deliver both health and human services in a comprehensive and holistic way. AESsmartCare empowers you to make the best decisions for your community.

The AESsmartCare Difference

What makes AESsmartCare different is our ability to deliver the broadest spectrum of public health services to local communities. The centralization of data provides you with the most complete profile of your clients' information so that you can make quick and effective decisions to promote their well-being. Our one-step point of entry streamlines the record of client information using a process you can trust and allows you to manage and distribute your resources more effectively. Our proven software solutions automate the collection and maintenance of data to provide you with the ability to measure the gains your community makes across all demographics and evaluate the related return on your investment. AESsmartCare gives you the ability to work preventatively rather than reactively, maximizing your effectiveness in the event of a crisis or outbreak. Our comprehensive and customizable solutions empower your organization, facilitating effective and efficient public health management.

Clinical Decision Support

For years, stakeholders involved in healthcare, including clinicians, staff, clients and their caregivers, and governmental agencies have been in agreement about the need for advancement in technology to help improve client care.

Researchers, practitioners and corporations have made, and are continuing to make, efforts to increase the practice of evidence-based medicine through the use of clinical decision support systems. Adsystem's AESsmartCare provide clinicians, often at the point of care, with clinical knowledge and client-specific information to help them make decisions that enhance their clients' care.

Benefits

- » Consistency and accuracy of data with required form fields and set business rules built into the program.
- » Eventual 100% elimination of property files once scanning of old records has been completed, which will free up a considerable portion of office space.
- » Reduction in paper usage.
- » Improved efficiency with rapid access to files by clerical staff.
- » Less data input by field staff when creating permits.
- » Improved quality assurance of work with the ability to easily audit files.
- » Improved data protection with our data being managed (including disaster recovery) at enterprise datacenters.

“The degree to which policies, programs, services, and research for the population increase desired health outcomes and conditions in which the population can be healthy
